***Reason for Allowance***

1. Applicant's arguments filed 8/13/07, pages 8-12, with respect to claims 1,4-14,16-18,24 have been fully considered and are persuasive. The rejection of claims has been withdrawn from the previous office action mailed 6/12/07 and the claims 1,4-14,16-18,24 are allowed.

***Allowable Subject Matter***

2. The invention is directed towards a user configuration of call queue and management of the queue for communication devices. The invention mainly discloses a method comprising:

- a memory
- a processor
- a call queue function configured to enable the configuration of an outgoing call queue of a plurality of call queues, the outgoing call queue having the unique call queue identifier associated with the particular wireless phone or user
- a queue dial function, when operated, result in dialing the first entry of the outgoing call queue associated with the particular wireless device
- wherein the queue dial function is configured to direct the processor to send the call queue identifier to the server, and the server is configured to use the call queue identifier to locate the outgoing call queue associated with the particular wireless phone from among the plurality of outgoing call queues and wherein the processor and the memory cooperate to enable the call queue function.

The prior art individually or in combination fails to render the above underlined unique feature obvious.
